Stigma and Borderline Personality Disorder

Federal Partners Meeting on Borderline Personality Disorder
Co-sponsored by National Alliance on Mental Illness &
National Educational Alliance for BPD
Rockville, MD – November 9, 2011

John M. Oldham, MD, MS
Senior Vice President and Chief of Staff
The Menninger Clinic
Professor and Executive Vice Chair
Menninger Department of Psychiatry and Behavioral Sciences
Baylor College of Medicine
President, American Psychiatric Association
“Why are you the way you are?”
Personality “Order” or “Disorder”

Q  Since everyone has a personality, how do we decide what a personality disorder is?

A  Having too much or too little of normal traits can cause problems in functioning (like high blood pressure or low blood pressure).
DSM-IV Definition of Personality Disorder

An enduring pattern of inner experience and behavior that deviates markedly from the expectations of the individual’s culture. This pattern is manifested in two (or more) of the following areas:

1. Cognition
2. Emotions
3. Interpersonal functioning
4. Impulse control
Borderline Personality Disorder (BPD)
APA DSM-IV Criteria
(At least 5 must be present)

1. Fear of abandonment
2. Difficult interpersonal relationships
3. Uncertainty about self-image or identity
4. Impulsive behavior
5. Self-injurious behavior
6. Emotional changeability or hyperactivity
7. Feelings of emptiness
8. Difficulty controlling intense anger
9. Transient suspiciousness or “disconnectedness”
Prevalence of Borderline Personality Disorder

- General population: 5.9%*
- Mental health outpatient: 11%
- Mental health inpatient: 19%
- Primary care: 6%

Comorbidity

- 84.5% of BPD patients met criteria for Axis I disorder, mean = 3.2
- Most common =
  - Mood disorders
  - Anxiety disorders
  - Substance use disorders

- Lenzenweger et al., *Biol Psychiatry*, 2007
Patients with BPD Have Severe Impairment in Functioning

- Common history of childhood trauma
- Mistrustful of others, yet cling to others for “life support”
- High internal levels of anxiety and distress
- Stormy interpersonal relationships
- High family stress
- Difficulty keeping jobs
- Overemotional and impulsive
- Self-injurious behavior
High Suicide Risk in Patients with BPD

8 – 10 % commit suicide
60 – 70 % make suicide attempts
Worldwide Magnitude of Psychiatric Disability
The Global Burden of Disease
Results: The Unseen Burden of Psychiatric Disease

“Most significantly, the study shows that the burden of psychiatric conditions has been heavily underestimated. Of the ten leading causes of disability worldwide in 1990, measured in years lived with a disability, five were psychiatric conditions.”

“The burden of mental illnesses, such as depression, alcohol dependence and schizophrenia, have been seriously underestimated by traditional approaches.”

Mortality Burden of Mental Disorders

From Eaton et al., 2008 (literature review)
APA Task Force on Borderline Personality Disorder (1989)

BPD

- Treatment is difficult
- Severe countertransference problems are common
- Outcome is variable
Greatest Stressors for Professionals

1. Patient anger
2. Suicide attempts
3. Threats of suicide

Hellman et al., 1988
Treatment Outlines for Borderline, Narcissistic and Histrionic Personality Disorders

The Quality Assurance Project
(Quality Assurance in Aspects of Psychiatric Practice is a project under the aegis of the Royal Australian and New Zealand Department of Health)

_Australian and New Zealand Journal of Psychiatry_ 1991; 25:392-403
Australian / New Zealand Study

- Questionnaire sent to all 1356 psychiatrists in Australia; 715 responded

- 254 responded to Borderline vignette
  - 80% saw such patients in practice
  - 40% would not treat
  - 5% felt there was no treatment for this disorder
Challenges in Developing Psychiatric Practice Guidelines

A Proposal for Practice Guidelines for Borderline Personality Disorder

John G. Gunderson, MD
September 1996

1. Overall Treatment Structure
2. Psychotherapy
3. Pharmacotherapy

1. Mental health is fundamental to health.
2. Mental disorders are real health conditions.
3. The efficacy of mental health treatments is well documented.
4. A range of treatments exists for most mental disorders.
“About one in five Americans experiences a mental disorder in the course of a year. Approximately 15 percent of all adults who have a mental disorder in one year also experience a co-occurring substance (alcohol or other drug) use disorder....”

Surgeon General’s Report on Mental Health
• “...nearly half of all Americans who have a severe mental illness do not seek treatment.”

• “...effective treatments for mental disorders promise to be the most effective antidote to stigma.”

Surgeon General’s Report on Mental Health

Psychotherapy Recommendations for BPD

1. Dialectical behavior therapy
   RCT: Linehan et al.
   - Archives Gen Psych, 1991
   - AJP, 1994
   - Am J Addictions, 1999
   Clinical consensus: Strong

2. Psychoanalytic/psychodynamic therapy
   RCT: Bateman & Fonagy, AJP, 1999
   Clinical consensus: Strong

APA, American Journal of Psychiatry, 2001
Institute of Medicine, Improving the quality of health care for mental and substance-use conditions: Quality Chasm Series, November 2005.

- Only 24% of 21 studies documented adequate adherence to specific recommendations in clinical practice guidelines
Types of Psychotherapy for BPD

1. Dialectical Behavior Therapy (DBT)
2. Mentalization-Based Therapy (MBT)
3. Schema-Focused Therapy (SFT)
4. Transference-Focused Therapy (TFT)
5. Cognitive Behavioral Therapy (CBT)
6. Systems Training for Emotional Predictability and Problem Solving (STEPPS)
7. General Psychiatric Management (GPM)

BY MARTIN INDYK
Personality Disorders in the Military

- Personality disorders usually lead to administrative separation
- Long term psychotherapy is not usually feasible
- Administrative channels vs. medical channels

Col. Rick Malone, MD, MPH
Walter Reed Army Medical Center
Administrative Separation

- “Fit but unsuitable” for military service
- Usually honorable discharge
- No severance package
- Usually not qualified for VA medical benefits

Col. Rick Malone, MD, MPH
Walter Reed Army Medical Center
Personality disorders are considered “Existing Prior to Service” or “Existing Prior to Enlistment” and are referred for administrative separation.

Col. Rick Malone, MD, MPH
Walter Reed Army Medical Center
Should the Name be Changed?

“Borderline personality disorder by any other name would still be as real, as disabling, and as necessary to treat, as other serious mental illnesses.”

Four Essentials of Effective BPD Treatment

1. Establishment of a strong therapeutic alliance
2. Availability of skilled therapists
3. Funds / insurance coverage
4. Time

NOTE: THERE IS NO QUICK FIX
“Psychiatric services are devalued by third-party payers with ridiculously low reimbursement, high co-payments, and arbitrarily meager annual or lifetime caps. Insurance executives often foolishly decide psychotherapy is not worth paying for despite its enormous value to many patients.”

Coverage for BPD Treatment

- BPD is covered by most plans
- There needs to be a medically necessary reason for treatment

Pamela Greenberg
President and CEO, Association for Behavioral Health and Wellness;
President, American College of Mental Health Administration
(October, 2011)
The Good News

• BPD is treatable
• Treatment works
• With good treatment, and enough time, patients get better
A Final Word on Stigma
Recommendations:

• National psychiatric organizations should define best practices of psychiatry and actively pursue their application in the mental health care system

• National psychiatric organizations, in collaboration with relevant academic institutions, should revise the curricula for undergraduate and postgraduate medical training

• National psychiatric societies should establish closer links and collaboration with other professional societies, with patients and family associations and with other organizations that can be involved in the provision of mental health care and the rehabilitation of the mentally ill

• National psychiatric societies should seek to establish and maintain sound working relationships with the media

• Psychiatrists must be aware that their behavior can contribute to the stigmatization of psychiatry as a discipline and of themselves as its representatives

Sartorius N, et al., 2010
The Problem of Stigma

- Active duty military reluctant to ask for mental health help. Seen as “weaklings” or blocked from return to duty.
- Even in military treatment centers, patients can be seen critically, as weak or faking illness.
In addition to education about treatment that works, we need the strong collective voice of “champions” to speak publically about overcoming, and living successfully with, psychiatric disorders
For example,

Kay Redfield Jamison, PhD
“It was difficult to make the decision to be public about having a severe psychiatric illness... but privacy and reticence can kill. The problem with mental illness is that so many who have it—especially those in a position to change public attitudes, such as doctors, lawyers, politicians, and military officers—are reluctant to risk talking about mental illness, or seeking help for it. They are understandably frightened about professional and personal reprisals”

Kay Redfield Jamison, PhD, 2001
And,

Marsha Linehan, PhD
“Dr. Marsha Linehan does a great service to millions of Americans who suffer from mental illness. As Dr. Linehan so movingly illustrates, people with psychiatric disorders are not so different from people with other medical conditions such as diabetes or heart disease—they are our friends, teachers, doctors, neighbors, and loved ones. Because of the stigma still felt about seeking treatment, however, those struggling with psychiatric problems often suffer in silence.”

John M. Oldham, MD
